**YOUR DIMENSIONS  
OUR STANDARD**

# HAULAGE AND BEVERAGES

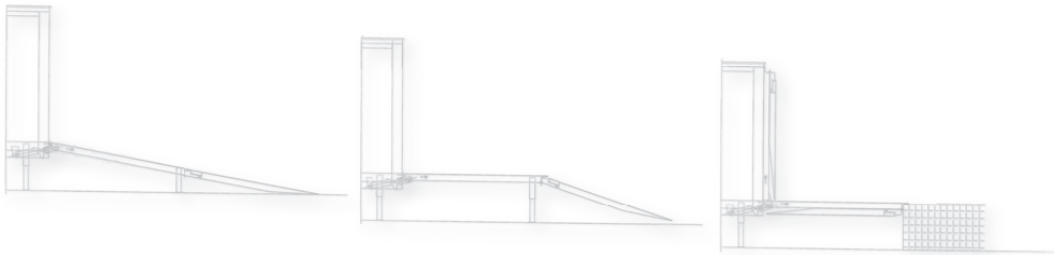

**And a beer with  
your bread and butter**

For automotive, europallets, windows and doors or the beverage industry: Meusburger builds the matching vehicle, adjusted precisely to the customer's needs on the basis of the loading gauges. Besides curtainsiders in standard and volume models, the Meusburger portfolio also includes full tarpaulin sideboard vehicles and "Albatross" gullwing semi-trailers as well as multideck semitrailers ("pot-bellied pigs") for beverage distribution. With a vehicle from Meusburger, our customers can bring home the bacon for everyone...

# LIFT TRUCKS AND WORK PLATFORMS

## Of long necks and short legs

More literally, you could also say: Floor conveyor vehicles and work platforms. These are extremely handy for lifting and lowering loads or people – but they all have the same drawback: The legs of a dachshund, or very little ground clearance. Meusburger offers vehicles that are optimised for these short-legged creatures as well, with or without tarpaulin. Multi-segment ramps ensure "dachshund-friendly" slope angles, and hydraulically liftable platforms in the lower deck give access to the upper deck. The special-purpose vehicles from Meusburger are also available as inloaders.

# HEAVY TRANSPORT UNDER TARPAULIN

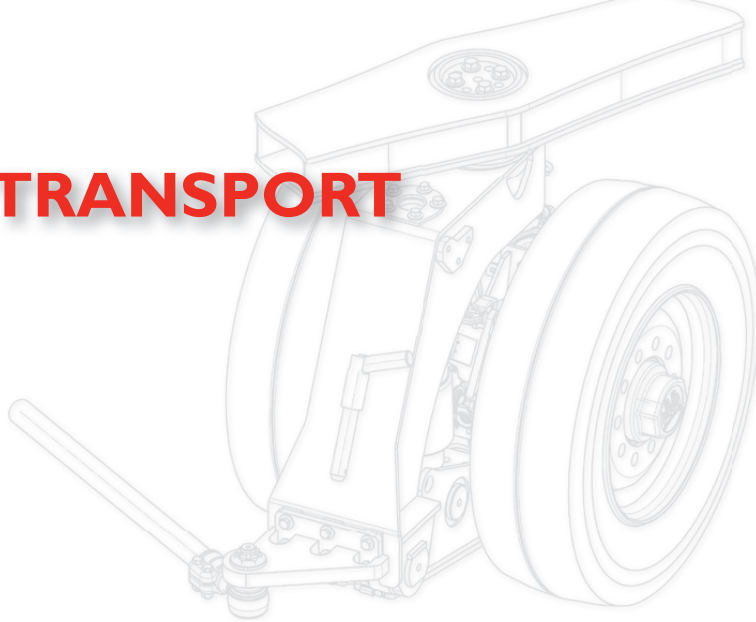

The "Swiss Army Knife"  
of the transport industry

Meusburger was making "Transformers" long before the films came out: Semitrailers which can be extended in all directions in short order, turning inconspicuous euro semitrailers into wider, longer and higher versions of themselves that are able to carry oversize loads such as wheel loaders, excavators, dumper trucks or even trams and locomotives – and as the finishing touch deliver their load safely under tarpaulin cover. And just like the Swiss Army Knives there are a multitude of helpful extra functions, and even the number of possible axles and payloads are practically limitless.

# HEAVY TRANSPORT OPEN

## Of elephants and blue whales

It is common knowledge that the roads of Europe are crawling with elephants – but this just highlights the presence of the Meusburger heavy transport whales. Their semitrailers can take the weight of as many as 20 fully grown elephants (5-7 t each) with ease, and a 33-metre long blue whale weighing 100 t can ride with room to spare. Normally though, Meusburger's customers tend to transport giant excavators, transformers, boilers and concrete elements.

As always with Meusburger, the semi-trailers are multi-functional, so they are suitable to transporting an enormous variety of cargo.

# CONSTRUCTION AND BUILDING MATERIALS

## The earth enthusiasts

Everything starts with the building industry: roads, houses, infrastructure in all its forms. Meusburger supplies the right vehicles for materials and machinery: From the super-lightweight open building material road train or semitrailer, with or without crane, to lowloaders for construction machinery of all kinds and sizes up to and including tippers. We also build drawbar trailers for transporting your tower cranes to the next building site, inloaders and roll-on roll-off skip vehicles. Each vehicle is designed individually.

# PRODUCTION AND EMPLOYEES

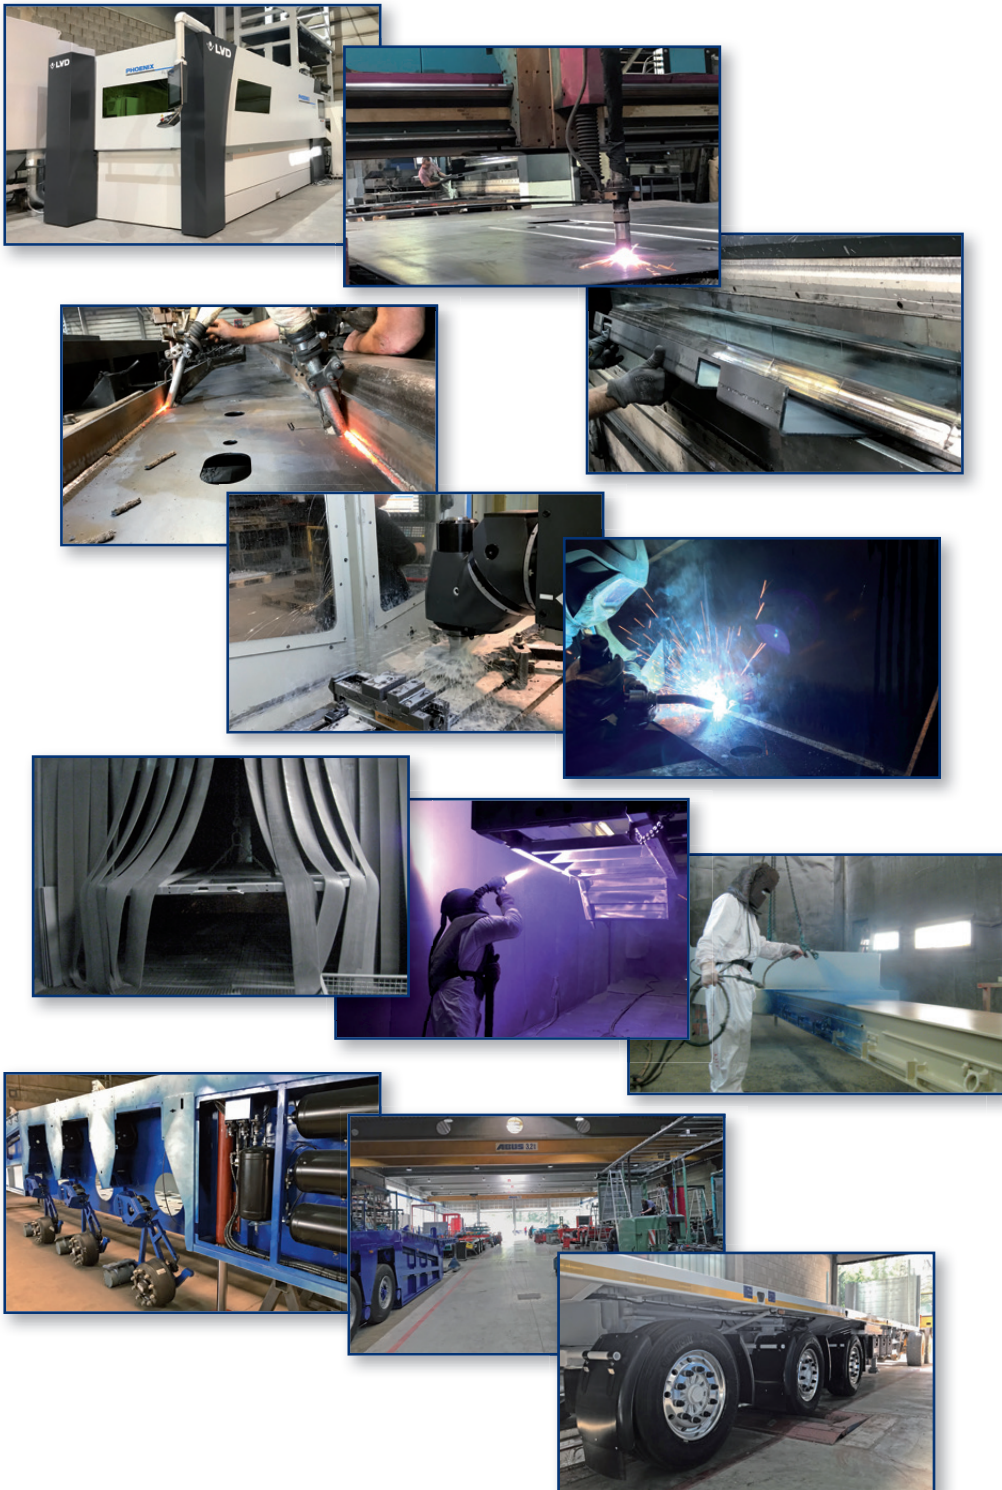

Meusburger operates a state-of-the-art machine park where it can carry out the full range of metal machining and surface treatment operations. Plasma and laser systems, bending machines and submerged arc longitudinal beam welding equipment ensure superior quality steel pre-processing results. CNC-controlled milling machines and lathes allow an extensive vertical range of manufacture.

Surface treatment processes are performed by spinning wheel blasting systems to prepare the base for optional zinc spraying and priming and topcoating in our in-house paint shop.

The most important asset of any company is its employees. The Meusburger Group employs a workforce of about 500 at five sites in four European countries.

The member companies of the Meusburger Group have all been honoured by the Chamber of Crafts (HWK) and the Chamber of Industry and Commerce (IHK) for their excellent training programmes – well trained employees are very important to Meusburger.

With a production volume of about 1750 vehicles per year, the Meusburger Group is one of the largest midsize automotive manufacturers in Europe. Its product spectrum covers payloads from 10 to 100 tons, making Meusburger one of the most versatile

commercial vehicle manufacturers as well. The main plant at Eging am See, Lower Bavaria, has earned an international reputation particularly on the basis of its innovative heavy transporter vehicles, whether open or under tarpaulin.
